NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

BACKGROUND

The following Management Discussion and Analysis (“MD&A”) prepared as of August 22, 2019 should be read in conjunction with the audited annual consolidated financial statements for the years ended April 30, 2019 and 2018, and the related notes thereto. Those audited annual consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (“IFRS”). All dollar amounts included therein and in the following MD&A are expressed in Canadian dollars except where noted.

Statements in this report that are not historical facts are forward-looking statements involving known and unknown risks and uncertainties, which could cause actual results to vary considerably from these statements. Readers are cautioned not to put undue reliance on forward-looking statements.

Additional information related to Nevada Exploration Inc. (the “Company” or “NGE”) is available for view on SEDAR at www.sedar.com.

CONTINUANCE OF OPERATIONS AND GOING CONCERN

The annual audited consolidated financial statements for the year ended April 30, 2019, www.sedar.com, have been prepared on a going-concern basis which presumes the realization of assets and discharge of liabilities in the normal course of business. The financial statements do not include adjustments to amounts and classifications of assets and liabilities that might be necessary should the Company be unable to continue operations. The business of mining and exploring for minerals involves a high degree of risk and there can be no assurance that current exploration programs will result in profitable mining operations. The Company’s continued existence is dependent upon the preservation of its interests in the underlying properties, the discovery of economically and recoverable reserves, the achievement of profitable operations, or the ability of the Company to raise additional financing, or alternatively upon the Company’s ability to dispose of its interests on an advantageous basis. The Company has not produced revenues from its exploration activities and does not have a regular source of cash flow. The Company will periodically have to raise funds to continue operations and, although it has been successful thus far in doing so there is no assurance it will be able to do so in the future. The Company estimates that it will need additional capital to operate for the upcoming year.

Although the Company has taken steps to verify title to the properties on which it is conducting exploration and in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee the Company’s title. Property title may be subject to unregistered prior agreements, unregistered claims and noncompliance with regulatory and environmental requirements.

DESCRIPTION OF THE BUSINESS

Nevada Exploration Inc. is a publicly traded junior mineral exploration company whose shares are traded on the TSX Venture Exchange (“TSX-V”) and on the OTCQB marketplace (“OTCQB”). The Company is engaged in gold exploration focused in Nevada, USA. The Company and its wholly owned subsidiary Pediment Gold LLC are referred to herein collectively as “the Company”, “NGE”, “our”, or “we”.

Nevada’s total gold production to date exceeds 225 million ounces, and its current annual production is approximately 5 million ounces, about the same as that of Canada. Less than half of Nevada’s bedrock is exposed in its mountain ranges, and the 225 million ounces of production to date clusters near these exposed bedrock areas. The bedrock and geology beneath the cover in Nevada’s valley basins is no different than that exposed in its ranges, and so is deemed to be as prospective. However, these covered areas have seen limited systematic exploration to date because conventional regional-scale geochemical sampling programs are ill-suited to looking under cover. Furthermore, the high cost of conventional drilling has precluded the wide-spread use of drilling as a follow-up prospecting tool to evaluate meaningful numbers of targets from regional-scale exploration. The result is that half of Nevada, the world’s highest gold producing jurisdiction by area, remains underexplored.

NGE’s team has spent the last decade to integrate the use of hydrogeochemistry (groundwater chemistry) with conventional exploration tools to develop a Nevada-specific regional-scale geochemical exploration program to evaluate Nevada’s basins. With innovative technology, NGE has completed the world’s largest groundwater sampling program for gold exploration, collecting approximately 6,000 samples, to evaluate Nevada’s covered basins for new

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

gold exploration targets. To advance follow-up targets, NGE has developed a truck-mounted small-diameter RC drill rig, tailored specifically to collecting low-cost groundwater samples (analogous to RAB drilling in other parts of the world), which the Company calls its Scorpion drill rig.

By integrating hydrogeochemistry and early-stage low-cost drilling with proven exploration methods, NGE is generating and advancing a portfolio of gold exploration projects. NGE and its exploration partners have now drilled more than 18,000 metres on targets defined by its integrated exploration program, and at several projects have discovered new large hydrothermal systems, with spatial extents covering several square kilometres, defined by system-appropriate alteration in bedrock over significant drill intervals (>30 metres) containing widespread low-level gold (10-100 ppb) and associated trace-element geochemistry consistent with the geologic and geochemical footprints of Nevada's large gold deposits. These are the types of footprints that have yielded multi-million-ounce gold deposits in Nevada, and with these results NGE has demonstrated the validity of its integrated exploration program to discover and advance new high-quality gold targets in otherwise blind settings.

By overcoming the challenges and radically reducing the costs of exploring in Nevada's covered basins, NGE is taking meaningful steps to open up this important new space for district-scale exploration. NGE's business model is to create shareholder value by leveraging its properties and technology through generative exploration, joint ventures, and other exploration partnerships with the specific goal of discovering large new Carlin-type gold deposits (CTGDs).

OVERALL PERFORMANCE

During the year ended April 30, 2019, the Company focused its efforts on advancing its South Grass Valley Project, with an initial phase of wide-spaced core holes. The Company also continued to maintain its holdings at its Kelly Creek, Awakening, and Grass Valley Projects.

HIGHLIGHTS

- On June 5, 2018, the Company announced that it had significantly increased its land holdings at its Kelly Creek Project based on the results of its 2017 Scorpion drill program. With the addition of 153 new claims covering 1,090 ha, NGE now controls 5,320 ha in the Kelly Creek Basin, making it the third-largest holder, after Newmont Mining Corp. and Barrick Gold Corp. in this prospective covered area at the north end of the Cortez (Battle Mountain-Eureka) Trend.
- On June 21, 2018, the Company announced that a review of historic drilling had provided further evidence for the presence of shallow hydrothermally-altered lower-plate bedrock at the Company's South Grass Valley Project, and that the Company had significantly increased its land holdings at the project by staking 227 new claims covering 1,900 ha, bringing the Company's total holdings at this district-scale project to 4,100 ha.
- On September 7, 2018, the Company announced that it had closed the second and final tranche of the previously announced private placement offering. Together with the first tranche closed on August 29, 2018, the Company raised aggregate gross proceeds of \$2,000,000, issuing a total of 16,000,000 Units.
- On September 24, 2018, the Company announced that it had mobilized a core drill rig to begin drilling at its South Grass Valley Project.
- On October 26, 2018, the Company appointed Christina Blacker as Chief Financial Officer.
- On November 26, 2018, the Company reported that the early results from its core drilling program at its South Grass Valley Project had established the presence of a large hydrothermal system defined by intense and widespread hydrothermal alteration across three drill holes, together nearly 2,500 metres apart, and that the assay results from the first two holes received as of that date confirm that this widespread alteration is associated with significant (>200 meter) intervals of enriched CTGD pathfinder elements. Based on these positive results, the Company enlarged its land holdings at the Project, staking approximately 400 hectares of additional claims, for new total, district-scale, land package of 4,500 hectares (45 km²).
- On January 14, 2019 the Company completed a private placement offering of 2,632,000 units at a price of \$0.25 per unit for gross proceeds of \$658,000.

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

- On January 23, 2019, the Company provided an update from its core drilling program at South Grass Valley, including assay results from additional wide-spaced step-out drill holes that established that the thick intervals of favourable “lower-plate” carbonate host rocks exhibiting intense hydrothermal-alteration and significant concentrations of CTGD pathfinder elements seen in earlier holes, that together define a NNW-SSE strike length of at least 2,500 metres, extend at least 400 metres in an E-W direction. By adding this third dimension (width), these results further quantify the large scale of this important new exploration target.
- On January 30, 2019, the Company announced that the results of a mercury soil sampling program combined with the results of its earlier hydrogeochemistry (groundwater) sampling program have extended the geochemistry support for its NNW-trending target at South Grass Valley another 1,500 metres beyond the 2,500 meters established based on the results of its drilling program, for a total of 4,000 metres. The lateral extent of the target area remains open.
- On April 10, 2019, the Company completed a private placement offering of 7,752,645 units at a price of \$0.275 per unit for gross proceeds of \$2,131,977.
- During the year ended April 30, 2019, the Company received gross proceeds of \$468,000 from the exercise of warrants.

MINERAL PROPERTIES

NGE directly holds unpatented mining claims and other mineral interests in the following properties through its wholly owned US subsidiary Pediment Gold LLC:

Project	NGE Claims		OTHER*	Total
	Claims	Area (km²)	Area (km²)	Area (km²)
South Grass Valley	545	45.0	-	45.0
Grass Valley	425	35.5	-	35.5
Kelly Creek	333	23.9	29.3	53.2
Awakening	6	0.5	-	0.5
TOTAL	1,309	104.9	29.3	134.20

*Leased private lands and interest in claims on BLM land held by third parties.

South Grass Valley

The South Grass Valley Project is located in Lander County, north-central Nevada, approximately 50 kilometres south southwest of Nevada Gold Mines’s Cortez complex. The Company has a 100% interest in 545 claims (45 km²) at South Grass Valley.

The South Grass Valley Project is situated along the Cortez (Battle Mountain - Eureka) Trend, within the specific region of north-central Nevada known for CTGDs defined to the West by the western extent of reactive lower plate carbonate host rocks and to the east by the eastern limit of unreactive upper plate cap rocks. Within this region, major gold mineralization is associated with areas where rising gold-bearing hydrothermal fluids ponded beneath unreactive upper plate cap rocks to react with the favourable lower plate carbonate host rocks below.

Two bedrock outcrops spaced 5 km apart at the South Grass Valley Project exhibit CTGD-style alteration and geochemistry within a 700-metre-thick sequence of lower plate carbonate host rocks immediately below the Roberts Mountains Thrust. Based on gravity and air magnetic geophysics, these favourable host rocks project under relatively shallow cover across a large portion of the Project. This large area of favourable geology is intersected by a N-S high-angle fault corridor that projects under the cover from the exposed range front based on mapping and gravity geophysics, providing a potential major conduit to expose the known favourable host rocks to mineralized hydrothermal fluids.

Using its industry-leading hydrogeochemistry exploration technology, from 2012 to 2013 the Company collected groundwater samples across South Grass Valley, and delineated a target defined by elevated concentrations of gold

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

and CTGD trace element geochemistry. This was an important step for the Project, because whereas many other groups have recognized the potential to discover new gold deposits in the favourable lower plate carbonate host rocks within South Grass Valley, for the first time, NGE positively delineated a discrete target within the Valley defined by elevated concentrations of gold and supporting geochemistry characteristic of CTGDs.

From November 2017 to January 2018, NGE completed 69 infill groundwater sampling boreholes at South Grass Valley to follow up on a gold-in-groundwater anomaly identified during a regional-scale, generative exploration program. The objectives of NGE's infill program were to establish the extent, size, and magnitude of the gold-in-groundwater footprint at South Grass Valley and its relationship to the larger prospective geologic setting, and to build support for a deeper drilling program. In total, NGE has now completed 135 boreholes across the Project area, collecting samples from most boreholes at multiple depths, for a total of 234 groundwater samples.

The results of NGE's infill borehole program have defined a focused 1,000 x 4,000 metre N-S oriented zone of enriched gold, arsenic, antimony, mercury, thallium, and sulfate in groundwater, representing a hydrogeochemistry footprint consistent in size and magnitude (with gold up to 800 ppt) as those seen around Lone Tree and Twin Creeks, large known gold deposits on the Cortez Trend, as well as at NGE's Kelly Creek Project. Importantly, this zone of enrichment is coincident with the projected intersection of a major N-S high-angle fault corridor and favourable lower plate carbonate host rocks known to exist at the Project.

In March 2018, to build confidence on the extent of the projections of the thick sections of lower plate containing CTGD-style alteration and geochemistry and under cover from where they are exposed in outcrop, Nevada Exploration commissioned a 991 line-km fixed-wing airborne magnetic survey across the Project, covering 124 sq. km.

At the regional scale, the results of the survey showed a pronounced NW-SE fabric, consistent with the strike of the fold axes known to control mineralization elsewhere along the Cortez Trend, including at Barrick's Goldrush deposit. At the project scale, the magnetic response across the exposed bedrock areas showed a strong correlation with mapped units, specifically with the higher-magnetic intrusive and volcanic units, and the lower-magnetic carbonate units, which provided confidence in the interpretation of the survey across the covered bedrock areas.

Based on the projections of the exposed geology and the survey results, the combined interpretation has resolved the covered portion of the Project into separate geologic domains. Most significantly, the survey defined a 15 sq. km magnetic low extending under cover from one of the exposed bedrock outcrops containing a thick sequence of lower-plate carbonate host rocks, which Nevada Exploration believes corroborate the projection of these favourable host rocks beneath the Project.

The results of the air magnetic survey provide strong support for the CTGD target at the Project, defined by a focused zone of enriched gold in groundwater coincident with the projected intersection of favourable lower-plate carbonate host rocks and a major high-angle fault corridor. Based on the size of target, the Company believes it is both large enough to support a district-scale mineral system, as well as suitably constrained for a focused deeper drilling program to evaluate the potential for economic mineralization.

In October 2018, Nevada Exploration began a Phase 1 drilling program at South Grass Valley to test the now focused areas for places where gold-bearing hydrothermal fluids were able to exploit favourable structural and permeability conditions to impregnate favourable iron-rich carbonate host rocks (all of which are now known to exist) at the scale required to source a large CTGD. In May 2019, the Company presented the final results from its Phase 1 drilling program, announcing that it has discovered a large mineralized Carlin-type hydrothermal system, successfully achieving the objective of the Phase 1 drilling program. The Company has begun a follow-up drilling program to further advance the Project.

Grass Valley

The Grass Valley project is located in Lander County, Nevada. At the northwestern end of Grass Valley, a 924 km² valley basin continues south from Nevada Gold Mines's Cortez Complex, one of the world's largest and lowest cost gold mines. The north end of the Grass Valley Project is located 13 km south southwest of the Cortez Complex. The Company has a 100% interest in 425 claims (35.5 km²) at Grass Valley.

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

Since 2011, NGE has been exploring for new CTGDs in Grass Valley using its hydrogeochemistry exploration technology. With this integrated approach, NGE has identified a 16 km (10 mi) by 5 km (3 mi) target at Grass Valley defined by elevated concentrations of gold and gold-related trace element geochemistry in groundwater.

In addition to completing a detailed hydrogeochemistry program, NGE and a former partner's work to date has also included: vegetation and soil geochemistry (including soil gas mercury); the acquisition and reprocessing of two historic seismic geophysical lines; geologic mapping; a gravity geophysical survey; one stratigraphic orientation drill hole; and geochemical analysis of approximately 2,400 metres of drill cuttings obtained from seven historic (2005 to 2008) geothermal exploration drill holes.

Based on the work to date at the Project, the Company has confirmed the presence of a large, gold-bearing hydrothermal system at the Grass Valley Project, consistent with the geologic setting of a CTGD. NGE's exploration team is continuing to update its geologic model with ongoing field mapping activities and 3D compilation and interpretation of its comprehensive exploration datasets. With this work, NGE believes it has established evidence that the complex structural controls associated with the Cortez mine to the north are also present along the western edge of Grass Valley, coincident with the elevated gold in groundwater. NGE expects the next stage of work at the project to be 1) extending a soil mercury survey, and 2) a shallow drilling program using its Scorpion drill rig to further characterize the geochemistry of the groundwater, alluvium, and bedrock along these inferred structural controls with the objective of refining the target for a focused deeper drilling program.

Kelly Creek

The Kelly Creek Project is located in Humboldt County, Nevada. The Company has combined its former Hot Pot Project into its Kelly Creek Project, which together are now referred to as the Kelly Creek Project, comprising: 333 unpatented mining claims held directly by the company, covering approximately 23.9 km²; 209 unpatented mining claims leased by the Company from Genesis Gold Corporation through a Mining Lease and Option to Purchase Agreement (the "Genesis Agreement"), covering approximately 15.1 km²; and approximately 14.2 km² of private land leased by the Company under a Mining Lease Agreement (the "Hot Pot Lease").

The Kelly Creek Basin is situated along the Battle Mountain – Eureka Gold Trend, and is bounded by multi-million-ounce gold deposits to the north (Twin Creeks, Getchell, Turquoise Ridge, and Pinson) and south (Lone Tree, Marigold, Trenton Canyon, Converse, Buffalo Valley, Copper Basin, and Phoenix) - together representing more than 70 million ounces of gold along the periphery of the Basin. Despite its proximity to significant mineralization, the interior of the Kelly Creek Basin has seen limited systematic exploration activity to date because its bedrock is largely covered by syn- to post-mineral volcanic units and post-mineral alluvium.

Recognizing the potential to find significant gold mineralization within the Kelly Creek Basin, dozens of major and junior explorers have spent tens of millions of dollars to follow the prospective geology seen in and proximal to the exposed bedrock in the surrounding mountain ranges beneath the sands and gravels covering the Basin. Within the areas controlled by NGE, this activity has included: Santa Fe Pacific completing wide-spaced bedrock mapping drilling in the 1990s; BHP completing an extensive soil auger geochemistry program through the late 1990s; and Placer Dome completing a reconnaissance-scale reverse circulation program in the early 2000s. Other companies that either now hold or have held claims in the immediate area include Newmont, Barrick, AngloGold, Hemlo, Homestake, and Kennecott. The efforts of each company have added valuable information about the geology of the Basin; however, without a cost-effective tool to conduct basin-scale exploration beneath the valley cover, the exploration programs to date in the Kelly Creek Basin have predominantly consisted of unsystematic and uncoordinated efforts focused on relatively small areas.

NGE has integrated the use of its proprietary hydrogeochemistry technology with conventional exploration methods to evaluate the larger Kelly Creek Basin, and has identified a highly prospective area in the middle of the Basin along a portion of a structurally-controlled, shallow, covered bedrock high coincident with highly anomalous gold and associated trace-element chemistry in groundwater.

Since establishing its initial holdings in the Kelly Creek Basin, NGE and its exploration partners have completed major work programs, building a comprehensive exploration dataset to understand the geology beneath the Basin. This exploration dataset now includes:

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

- 1,000 km² of regional magnetic geophysical data;
- 670 km² of detailed air magnetic geophysical data;
- 1,000 km² of regional gravity geophysical data;
- 100 km² of detailed gravity geophysical data;
- 33 line-km of CSAMT geophysical data;
- 49 line-km of 3D reflection seismic data; and
- A drilling database containing 31 drill holes, plus 114 historic drill holes, representing more than 29,000 metres of drilling, including assay results for more than 5,000 drill intervals representing more than 10,000 metres of drill assay data.

Based on the work to date, NGE has confirmed that the favourable geologic setting (host units and structural controls) associated with the adjacent Lone Tree and Marigold deposits project northwards to the Kelly Creek Project area, beneath relatively shallow cover. NGE's earlier drilling and groundwater sampling confirmed that this relatively shallow, prospective structural and bedrock setting was also associated with enriched gold in groundwater, alluvium, and bedrock.

From late 2016 through late 2017, the Company completed a 61 hole, 5,864 m Scorpion drilling program to collect 3D groundwater, alluvium, and top of bedrock samples across this prospective covered bedrock area, with the objective of constraining the target by vectoring into areas of gold mineralization in bedrock large enough to be associated with the footprint of a large CTGD. Of the 61 holes, 41 holes encountered bedrock, at an average depth of 84 m, which allowed for widespread bedrock mapping and sampling. From the 61 holes, 552 water samples were collected, on average every 10 m downhole, providing important 3D geochemistry across the project, especially in areas of deeper bedrock where the Scorpion could not sample bedrock directly.

The results have established that the lateral extent of the gold-in-groundwater footprint at Kelly Creek is of a comparable size, and perhaps larger, than that seen at Lone Tree, consistent with the presence of a large, robust, mineralized system. Zones of enriched gold in groundwater form focused, parallel NNW-trending lineaments (also reflected more broadly in arsenic and antimony in groundwater) bounded by the primary N-S structural fabric that runs parallel to Lone Tree and north from Marigold. These linear zones of enrichment that cut through this large favourable system are consistent with the geometry of mineralization hosted within secondary zones of structural extension (Riedel-style shears), marking potential conduits of enhanced vertical hydrothermal fluid flow that are known to provide important ore-controls at many large deposits in Nevada (including Lone Tree).

The results of the Scorpion bedrock sampling combined with the bedrock samples from earlier drilling together define two clusters of >0.1 g/t gold in bedrock, covering areas at least 700 m x 300 m and 1,000 m x 600 m respectively, associated with the discrete lineaments of increased gold-in-groundwater enrichment, which provide new strong evidence that the hydrothermal system at Kelly Creek is mineralized over a larger area than previously known.

By combining the latest Scorpion drill results with the results of earlier deeper core drilling and the geophysical structural interpretation (based on the combined gravity, air magnetic, seismic, and CSAMT datasets), NGE believes that:

- The primary and secondary structural fabric seen in the geophysics, core drilling, and hydrogeochemistry, plus the thick sections of alteration and geochemistry seen in the drilling, support the presence of major reactivated high-angle structural conduits associated with a hydrothermal system of a size necessary to support the formation of a major mineralized system;
- Veining and structural damage seen in the core drilling confirm that the permeability of the units proximal to the favorable structural conduits has been improved over large areas and is well-suited to support gold deposition;

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

- Thick and wide-spread intervals of hydrothermal alteration, oxidation, decalcification, and carbon remobilization confirm a large hydrothermal system was active at Kelly Creek, and mark the style of alteration and mineralization associated with CTGD, which together are indicative of a favorable mineralizing environment;
- The geochemical footprint seen across the project, which includes large areas of gold mineralization in bedrock, is consistent in terms of the size and geochemical package with the footprints associated with many of Nevada's large mineral systems, which confirms: (i) that the system's hydrothermal fluids were pregnant; (ii) that the pregnant fluids were present across large areas of the system; and (iii) that the pregnant fluids could potentially source economic gold mineralization where provided with favourable depositional conditions, namely suitably-permeable iron-rich host rocks; and
- Thick sections of bedrock units known to support mineralization nearby at Lone Tree and Marigold were encountered by all of the widespread and deeper core drill holes, which confirm that favourable, iron-rich, and suitably permeable host rocks are present across the entire project area and at depth.

NGE believes that these results confirm that the critical components needed to host a large CTGD deposit are present at the Kelly Creek Project, and that the combined dataset suggest the gold-bearing hydrothermal system at Kelly Creek is likely the extension of the system responsible for the adjacent Lone Tree (produced 4.6 million ounces) and Marigold (produced 3.2 million ounces plus 4.9 million ounces indicated) deposits, with the potential to support significant additional mineralization.

The Company expects that the next phase of work at Kelly Creek will consist of deeper drilling to test for areas where gold-bearing hydrothermal fluids were able to exploit favourable structural and permeability conditions to impregnate favourable iron-rich host rocks (all of which are now known to exist) at the scale required to source a major deposit. This deeper drilling will target the discrete lineaments of enriched gold in groundwater defined by the 3D Scorpion program suggestive of possible Riedel shear structures that could provide the confluence of critical components needed to host higher-grade mineralization.

Awakening

The Awakening Project is located in Humboldt County, Nevada, approximately 50 km north-northwest of Winnemucca, Nevada, and directly north of the Sleeper Gold Mine. The Company has a 100% interest in 6 claims (0.5 km²) at Awakening.

The Awakening Project is largely covered by syn- to post-mineral volcanic units and post-mineral alluvium and as a result, has seen little historic exploration activity. Projections of favourable lithology, structure, and alteration at regional, district, and property scales suggest that important gold-silver mineralization may be located within economic depths beneath the cover at Awakening.

Work to date on the Project by NGE and a former exploration partner includes:

- 85 km² of high quality gravity geophysics data;
- 173 km² of air magnetic data; and
- Approximately 3,000 metres of core and RC drilling.

NGE's management believes that the results of NGE's integrated exploration program at Awakening have delineated a focused pediment target along a structural zone extending north from Paramount Gold & Silver Corp.'s Sleeper Gold Project.

The exploration programs and technical disclosure for the Company are designed by Wade A. Hodges, CEO for NGE who is a 'qualified person', as defined by National Instrument 43-101, Standards of Disclosure for Mineral Projects.

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

Summary of expenditures by property:

Resource properties expenditures for the period ended April 30, 2019 were as follows:

2019		Grass Valley		South Grass Valley		Kelly Creek		Awakening		Total
Land holding costs	\$	93,664	\$	236,450	\$	231,187	\$	1,335	\$	562,636
Drilling		-		1,702,188		-		-		1,702,188

	\$	91,241	\$	375,197	\$	670,911	\$	1,278	\$	1,138,627

RESULTS OF OPERATIONS

For the three months ended April 30, 2019

The Company's net loss for the three-month period ended April 30, 2019 (the "Current Period") was \$900,764 compared to \$610,665 for the three-month period ended April 30, 2018 (the "Previous Period"). The increase is primarily a result of the following:

Exploration and evaluation expenditures during the Current Period were \$404,666, compared to \$238,542 during the Previous Period. The increase is primarily a result of increased drilling activity during the Current Period.

Professional fees and consultants expense during the Current Period were \$76,780 compared to \$33,966 during the Previous Period. The increase in professional fees and consultants expense is due to an increase in consultants engaged during Current Period as compared to the Previous Period.

Share-based payments during the Current Period was \$70,052 compared to \$17,413 during the Previous Period. The increase in share-based payments is due to the granting of 250,000 stock options and the related vesting through the Current Period as compared to the Previous Period when no stock options were granted.

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

During the year ended April 30, 2019

The Company's net loss during the year ended April 30, 2019 (the "Current Period") was \$4,333,994 compared to \$2,866,420 for the year ended April 30, 2018 (the "Previous Period"). The increase is primarily a result of the following:

Exploration and evaluation expenditures during the Current Period were \$2,435,634, compared to \$1,138,627 during the Previous Period. The increase is primarily a result of increased drilling activity during the Current Period.

Share-based payments during the Current Period was \$523,159 compared to \$295,799 during the Previous Period. The increase in share-based payments is due to the granting of 3,255,000 stock options and the related vesting through the Current Period as compared to the Previous Period when 350,000 stock options were granted.

The increases in net loss discussed above were partially offset by a decrease in equipment and vehicles, which was \$39,548 during the Current Period, compared to \$104,526 during the Previous Period. The decrease in equipment and vehicles is due to a decrease in equipment repairs required during the Current Period.

During the Current Period, the Company disposed of exploration equipment that was fully amortized in a prior year, for \$Nil proceeds, resulting in no gain or loss. The Company also recorded an impairment on a database resulting in a loss of \$27,114.

LIQUIDITY AND CAPITAL RESOURCES

Liquidity

The Company has financed its operations primarily through the issuance of common shares. The Company continues to seek capital through various means including the issuance of equity and/or debt.

Net cash used in operating activities for the year ended April 30, 2019 was \$3,567,842 compared to \$2,342,503 used during the year ended April 30, 2018 and consists primarily of the operating loss and changes in non-cash working capital items as detailed in the consolidated financial statements for the year ended April 30, 2019 and filed on www.sedar.com.

Net cash provided by investing activities for the year ended April 30, 2019 was \$Nil compared to net cash used in investing activities of \$55,639 during the year ended April 30, 2018. The decrease for the year ended April 30, 2019 is due to a decrease in the acquisition of equipment and intangible assets as compared to the year ended April 30, 2018.

Net cash provided by financing activities for the year ended April 30, 2019 was \$5,201,117. During the year ended April 30, 2019, the Company received \$468,000 from the exercise of 4,680,000 warrants, as well as net proceeds of \$4,740,334 from the issuance of 26,384,645 units during the period.

During the year ended April 30, 2018, net cash provided by financing activities was \$2,334,695 related to net proceeds received from two private placements totaling \$2,231,983 from the issuance of 6,560,600 units, as well as proceeds received of \$115,000 from warrants exercised during the period.

Capital Resources

As at April 30, 2019, the Company has a finance lease obligation for a leased vehicle of \$Nil (US - \$Nil), with blended monthly payments of principal and interest, bearing interest at a rate of 2.90% per annum. The total of principal repayments of the finance lease obligations that are due within the next one year is \$Nil, and the Company has received title to the leased vehicle.

Assets and liabilities

At April 30, 2019, the Company had working capital of \$1,765,975 (April 30, 2018 - \$164,677). Current assets include cash and cash equivalents totaling \$1,841,216 (April 30, 2018 - \$197,094); \$25,423 (April 30, 2018 - \$20,869) in accounts receivable; \$6,803 (April 30, 2018 - \$5,102) in short term investments; and \$8,473 (April 30, 2018 - \$27,335)

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

in prepaid expenses. Current liabilities include accounts payable and accrued liabilities of \$115,940 (April 30, 2018 - \$78,710) and current portion of finance lease obligations of \$Nil (April 30, 2018 - \$7,013)

Deposits and bonds consist of deposits for credit cards, as well as for land reclamation which also add to the Company's asset base. Deposits (bonds) are required by the U.S Bureau of Land Management (BLM) to ensure that reclamation and clean-up work on the Company's properties will be completed to the satisfaction of the BLM. Total deposits as at April 30, 2019 are \$75,731 (April 30, 2018 - \$130,780).

COMMITMENTS

As April 30, 2019, the Company has total office lease commitments of \$71,434, as follows:

- a) Total office lease payments of \$28,412 ending October 31, 2019.
- b) Total office lease payments of \$22,841 ending December 31, 2019.
- c) Total office lease payments of \$20,181 ending February 28, 2020.

OFF-BALANCE SHEET ARRANGEMENTS

As at April 30, 2019, NGE had no off-balance sheet arrangements such as guaranteed contracts, contingent interests in assets transferred to an entity, derivative instrument obligations or any instruments that could trigger financing, market or credit risk to NGE.

RELATED PARTY TRANSACTIONS

During the year ended April 30, 2019, the Company:

- i) paid \$16,850 in professional fees to a corporation owned by the former Chief Financial Officer of the Company.
- ii) paid or accrued \$35,806 in consulting fees to a corporation of which the Chief Financial Officer is an employee.
- iii) paid or accrued \$30,000 in consulting fees to a company controlled by a director of the Company and to a consultant related to a director.
- iv) recorded share-based payments of \$404,326 related to the fair value of stock options vesting through the period to officers, directors, and a consultant related to a director.

During the period ended April 30, 2018, the Company:

- i) paid or accrued \$44,750 in professional fees to a corporation owned by the Chief Financial Officer of the Company.
- ii) recorded share-based payments of \$222,082 related to the fair value of stock options vesting through the period to an officer and directors.

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

The amounts included in accounts payable and accrued liabilities which are due to related parties are as follows:

	April 30, 2019	April 30, 2018
Due to corporation of which the Chief Financial Officer is an employee	\$ 5,250	\$ -
Due to corporation owned by the former Chief Financial officer	-	29,850

FINANCIAL INSTRUMENTS AND FINANCIAL RISK FACTORS

Risk Management Policies

The Company is exposed to risk due to the nature of its financial instruments. Risk management is the responsibility of management and the Company did not use derivative instruments.

Fair value

Financial instruments measured at fair value are classified into one of three levels in the fair value hierarchy according to the relative reliability of the inputs used to estimate the fair values. The three levels of the fair value hierarchy are:

Level 1 – Unadjusted quoted prices in active markets for identical assets or liabilities;

Level 2 – Inputs other than quoted prices that are observable for the asset or liability either directly or indirectly; and

Level 3 – Inputs that are not based on observable market data.

Short term investments are measured at level 1 of the fair value hierarchy. The fair value of short term investments is measured at the market price of the common shares held at the measurement date. The carrying value of cash and cash equivalents, other receivable, deposits and bonds, and accounts payable and accrued liabilities approximate their fair value because of the short-term nature of these instruments.

Financial risk factors

The Company's risk exposures and the impact on the Company's financial instruments are summarized below:

Credit risk

Credit risk is the risk of loss associated with a counterparty's inability to fulfill its payment obligations. The Company's credit risk is primarily attributable to cash and cash equivalents and deposits and bonds. Management believes that the credit risk concentration with respect to cash and cash equivalents, deposits and bonds is remote as it maintains accounts with highly-rated financial institutions.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure and financial leverage. It also manages liquidity risk by continuously monitoring actual and projected cash flows. The Board of Directors reviews and approves the Company's operating and capital budgets, as well as any material transactions out of the normal course of business.

As at April 30, 2019, the Company had a cash and cash equivalents balance of \$1,841,216 (April 30, 2018 - \$197,094) to settle current liabilities of \$115,940 (April 30, 2018 - \$85,723). The Company believes that there is minimal liquidity risk as at April 30, 2019.

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates and equity prices.

(a) Interest rate risk

The Company is exposed to interest rate risk to the extent that the cash and cash equivalents maintained at the financial institutions is subject to floating rate of interest. The interest rate risks on cash and cash equivalents and deposits and bonds are not considered significant.

NEVADA EXPLORATION INC.
Management Discussion and Analysis – Form 51-102F1
For the Year Ended April 30, 2019

(b) Foreign currency risk

The Company is exposed to financial risk arising from fluctuations in foreign exchange rates and the degree of volatility of these rates. A significant portion of the Company's expenses is denominated in US dollars. Consequently, certain assets, liabilities and operating expenses are exposed to currency fluctuations. The Company does not use derivative instruments to reduce its exposure to foreign currency risk. Net assets denominated in foreign currency and the Canadian dollar equivalents as at April 30, 2019 are as follows:

	USD	CDN
Current assets	\$ 82,638	\$ 110,925
Non-current assets	190,881	256,220
Current liabilities	<u>(13,872)</u>	<u>(18,620)</u>
	<u>\$ 259,647</u>	<u>\$ 348,525</u>

Based on the above net exposures as at April 30, 2019, and assuming all other variables remain constant, a 10% change in the value of the US dollar against the Canadian dollar would result in an increase/decrease of USD\$25,965 in comprehensive loss.

CAPITAL MANAGEMENT

In order to maintain its capital structure, the Company is dependent on equity funding and when necessary, raises capital through the issuance of equity instruments, primarily comprised of common shares and share purchase warrants. In the management of capital, the Company includes the components of equity as well as cash and cash equivalents.

The Company prepares annual estimates of exploration expenditures and monitors actual expenditures compared to the estimates to ensure that there is sufficient capital on hand to meet ongoing obligations. The Company's investment policy is to invest any excess cash in highly liquid short-term deposits with terms of one year or less and which can be liquidated after thirty days without interest penalty. The Company currently has insufficient capital to fund its exploration programs and is reliant on completing equity financings to fund further exploration. The Company is not subject to any externally imposed capital requirements.

There were no changes in the Company's approach to capital management during the period ended April 30, 2019.

RISKS AND UNCERTAINTIES

In conducting its business of mineral exploration, NGE is subject to a wide variety of known and unknown risks, uncertainties and other factors which may affect the results, performance or achievement of the Company. Such risks and factors include, among others: risks related to the actual results of current and future exploration activities; future prices for gold, silver, and other commodities; environmental risks and hazards; the Company's lack of substantial revenue; the Company's ongoing need to raise money through equity financings; increases to operating, labour, and supply costs; and changes to government regulation, taxes, and fees. Although the Company attempts to identify and plan for these important factors that could affect results materially, the Company cautions the reader that the above list of risk factors is not exhaustive, and that there may be other factors that cause results to differ from anticipated, estimated, or intended results. Ultimately, there can be no guarantee that the Company will be successful in making an economic mineral discovery.

CRITICAL ACCOUNTING ESTIMATES

The preparation of these consolidated financial statements requires management to make certain estimates, judgments and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported revenues and expenses during the period.

Significant assumptions about the future and other sources of estimated uncertainty that management has made at the end of the reporting period, that could result in a material adjustment to the carrying amounts of assets and liabilities in the event that the actual results differ from assumptions made, relate to, but are not limited to, the following:

- i) the estimated useful lives of equipment and intangible assets and the related amortization;
- ii) impairment of equipment;
- iii) valuation of share-based payments and warrants;
- iv) estimated amounts for environmental rehabilitation provisions; and
- v) going concern

CHANGES IN ACCOUNTING POLICIES AND INITIAL ADOPTION

New or revised standards and amendments to existing standards adopted during the period

- New standard IFRS 9, *Financial Instruments*, was issued in final form in July 2014 and will replace IAS 39, *Financial Instruments: Recognition and Measurement*. IFRS 9 introduces new requirements for classifying and measuring financial assets. This standard is effective for years beginning on or after January 1, 2018. The adoption of this new standard impacted financial instrument classification only and did not have any impact on measurement.
- New standard IFRS 15, *Revenue from contracts with customers*, provides guidance on how and when revenue from contracts with customers is to be recognized, along with new disclosure requirements in order to provide financial statement users with more information and relevant information. This standard is effective for reporting periods on or after January 1, 2018. The adoption of this amendment did not have a significant impact.

New or revised standards and amendments to existing standards not yet effective

The Company has not applied the following new or revised standard and amendments that have been issued but are not yet effective:

- New standard IFRS 16, *Leases*, specifies how an IFRS reporter will recognize, measure, present and disclose leases. The standard provides a single lessee accounting model, requiring lessees to recognize assets and liabilities for all leases unless the lease term is 12 months or less or the underlying asset has a low value. Lessors continue to classify leases as operating or finance, with IFRS 16's approach to lessor accounting substantially unchanged from its predecessor, IAS 17. This standard is effective for reporting periods beginning on or after January 1, 2019. The impact of this amendment is to be determined.

The Company plans to adopt this standard as soon as it becomes effective for the Company's reporting period.

DISCLOSURE CONTROLS AND PROCEDURES AND INTERNAL CONTROLS

In connection with National Instrument 52-109 (Certificate of Disclosure in Issuer’s Annual and Interim Filings) (“NI 52- 109”), the Chief Executive Officer and Chief Financial Officer of the Company have filed a Venture Issuer Basic Certificate with respect to the financial information contained in the condensed consolidated interim financial statements and this accompanying interim MD&A (together the “Interim Filings”). In contrast to the full certificate under NI 52-109, the Venture Issuer Basic Certificate does not include representations relating to the establishment and maintenance of disclosure controls and procedures and internal control over financial reporting, as defined in NI 52-109. For further information the reader should refer to the Venture Issuer Basic Certificates filed by the Company with the Annual Filings on SEDAR at www.sedar.com.

NOTE REGARDING FORWARD-LOOKING STATEMENTS

Statements herein that are not historical facts are forward-looking statements that are subject to risks and uncertainties. Words such as “expects”, “intends”, “may”, “could”, “should”, “anticipates”, “likely”, “believes” and words of similar import also identify forward-looking statements.

Forward-looking statements are based on current facts and analyses and other information that are based on forecasts of future results, estimates of amounts not yet determined and assumptions of management, including, but not limited to, assumptions regarding the Company’s ability to raise additional debt and/or equity financing to fund operations and working capital requirements and assumptions regarding the Company’s mineral properties.

Actual results may differ materially from those currently anticipated due to a number of factors including, but not limited to, general economic conditions, the geology of mineral properties, exploration results, commodity market conditions, the Company’s ability to generate sufficient cash flows from operations and financing to support general operating activities and capital expansion plans, and laws and regulations and changes thereto that may affect operations, and other factors beyond the reasonable control of the Company.

Additional information on factors that may affect the business and financial results of the Company can be found in filings of the Company with the British Columbia Securities Commissions on www.sedar.com

Approved by the Board of Directors
